
WAND Lean Quality Taxonomy

One of the most important things about lean quality is cutting down on waste: defects, overproduction, extra processing, motion, waiting, inventory, transport, and unused potential. Why then, would a company create documents surrounding lean quality that fall into an inefficient system which leaves data in silos where it cannot be quickly accessed? For this reason, your company needs the Lean Quality Taxonomy. With this taxonomy, you can organize your information with ease, train your AI with speed, and begin using your company's documents and data in no time. Improve the efficiency and effectiveness of your data by eliminating wasteful procedures!
