

WAND Aerospace Taxonomy

Aerospace can be loosely defined as the manufacturing of a wide range of both aircraft and spacecraft products including passenger and military airplanes, helicopters, gliders, spacecraft, launch vehicles, satellites, and other space-related items. All these vehicles and systems are highly complicated, precise machines. It would only make sense that the data generated from an aerospace company should also be highly precise. Unfortunately, this is not the case in many companies. Enter the WAND Aerospace Engineering Taxonomy. With this product, you can organize your documents with ease, train your AI with speed, and begin using your company's documents and data in no time. As with all our taxonomies, this strong foundation metadata model can be customized to include additional terms related to your specific needs or industry.

This taxonomy contains **5,654** terms and **1,127** synonyms.

Top level terms include:

- Aerospace Engineering Disciplines **(24)**
- Aerospace Materials **(59)**
- Aerospace Vehicles **(224)**
- Associations **(21)**
- DOD Aerospace Vehicle Designation **(89)**
- Design **(1234)**
- Documentation **(37)**
- Regulations **(3805)**
- Maintenance **(51)**
- Regulatory Agencies **(22)**
- Research and Development **(64)**
- Standards **(12)**
