

WAND Drug Development and Manufacturing Taxonomy

This taxonomy is designed to provide anyone involved in the development of new medicines with the ability to tag and organize their unstructured information related to drug development and manufacturing. The hierarchical structure of terms covers the entire process of bringing a new drug to market from discovery to release. As with all our taxonomies, the WAND Drug Development and Manufacturing Taxonomy provides a strong foundation of terms and can be customized to include terms specific to the drugs that are currently being, or have been, developed.

This taxonomy contains **3,820** terms and **2,413** synonyms.

Top level terms include:

- Associations and Organizations **(17)**
- Cell Therapy **(140)**
