WAND Supply Chain Management Taxonomy

A supply chain is the network that exists to move inventory from suppliers, to manufacturers, warehousing, or distribution centers. This taxonomy covers not only the functional areas of the supply chain, but also the supporting areas. It only makes sense that any company that relies on a supply chain would want to be able to access related documents quickly and accurately. With this taxonomy, you can organize your information with ease, train our AI with speed, and begin using your company's documents and data in no time. As with all our taxonomies, this strong foundation metadata model can be customized to include additional terms relating to your specific needs or industry.

This taxonomy contains **673** terms and **1,456** synonyms.
